IN THE SPECIFICATION

On Page 17, please amend the first partial paragraph thereof as follows:

"newsgroup address (step 518). As shown in step 520, if a match is found then the parsed address is associated with a "newsgroup" icon. If the system determines that the address is an invalid email address or is in fact an Internet address (step 522), the text is marked with a "text" icon (step 524) and is still available for editing by the user. If it is found that the address is a valid email address but found not to match any contact list (step 524525), the address is marked with an "address" icon as shown in step 526. The address may then optionally be checked against any server contact lists (step 528) (in the manner described in connection with FIG. 4C). The system repeats the process until all email addresses have been checked (step 530)."
